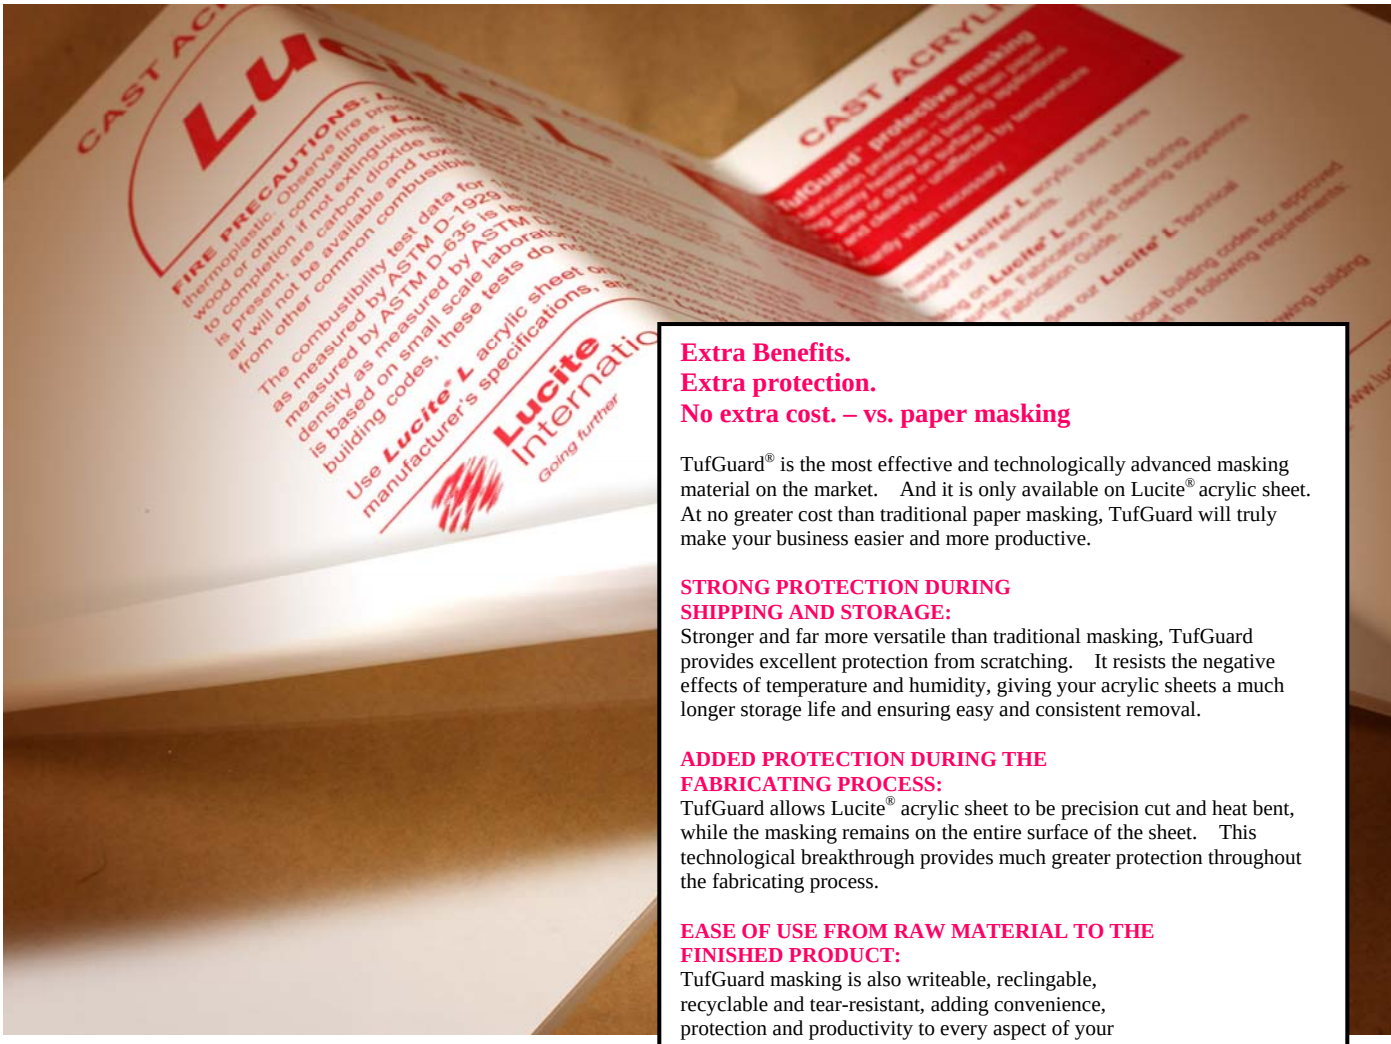
TufGuard® Masking

How Does TufGuard® work?

Well, we could tell you, but…
After several years of extensive R&D, here's what we can say: We've eliminated the most troublesome components from traditional masking. With TufGuard, there is no paper or adhesive to degrade over time. Instead, TufGuard uses a revolutionary material that allows the masking to be removed, replaced, heated and bent. As always, Lucite® lives up to its promise – Going Further.



Extra Benefits.
Extra protection.
No extra cost. – vs. paper masking

TufGuard® is the most effective and technologically advanced masking material on the market. And it is only available on Lucite® acrylic sheet. At no greater cost than traditional paper masking, TufGuard will truly make your business easier and more productive.

STRONG PROTECTION DURING SHIPPING AND STORAGE:
Stronger and far more versatile than traditional masking, TufGuard provides excellent protection from scratching. It resists the negative effects of temperature and humidity, giving your acrylic sheets a much longer storage life and ensuring easy and consistent removal.

ADDED PROTECTION DURING THE FABRICATING PROCESS:
TufGuard allows Lucite® acrylic sheet to be precision cut and heat bent, while the masking remains on the entire surface of the sheet. This technological breakthrough provides much greater protection throughout the fabricating process.

EASE OF USE FROM RAW MATERIAL TO THE FINISHED PRODUCT:
TufGuard masking is also writeable, reclingable, recyclable and tear-resistant, adding convenience, protection and productivity to every aspect of your manufacturing process.

Lucite International, Inc. 7275 Goodlett Farms Parkway, Cordova, TN 38016-4909
